

Centralized multi-vendor RAN automation and management for modern 5G Private Networks

The Qualcomm Edgewise Suite is a premium multi-vendor RAN automation and management SaaS platform that provides System Integrators and Service Providers with a centralized portal designed to alleviate system complexity, reduce deployment time, simplify network management, and increase ease-of-use for customers spanning industries.

And Qualcomm Edgewise Suite fits together with a broad and multi-vendor ecosystem of infrastructure products, IoT devices and more, readying 5G Private Networks for a new phase of growth.

Automation and management capabilities supporting the full 5GPN life cycle

Pre-defined 5G profiles

Design once and deploy across sites with 5G profile-based network setup enabling simplification, optimization and repeatability with "copy/paste" functionality.

Network Programmability

Customize, differentiate and future-proof your network with rapid app development to address diverse verticals, use cases and customer needs.

Ecosystem enablement

Together with our partners, Qualcomm Technologies is enabling a broad 5G device ecosystem spanning verticals and use cases, in addition to delivering pre-verified end-to-end blueprints for Private 5G connectivity from RAN to devices to core.

RAN vendor choice (multi-vendor)

Choose the best RAN vendor(s) and equipment for your business case, across multiple projects, and manage them seamlessly from a common management platform with network vendor abstraction, avoiding vendor lock-in.

Simplified RAN Management

Manage one or many 5G Private Networks around the globe and across a multi-vendor landscape from a single location.

Auto Plan / Build / Deploy

Harness Qualcomm Technologies' expertise with automated process for estimating small cell requirements and use case needs without having to visit the site. Deploy Cells with pre-defined profiles for optimized performance from the start.
