

# Progress on LAA and its relationship to LTE-U and MulteFire™

---

Qualcomm Technologies, Inc.  
February 22, 2016

# Making best use of 5 GHz unlicensed band

LTE-U/LAA, LWA, MulteFire™ and Wi-Fi will coexist in 5 GHz

## Enterprises

## Small Businesses

## Venues

## Residential/ Neighborhood

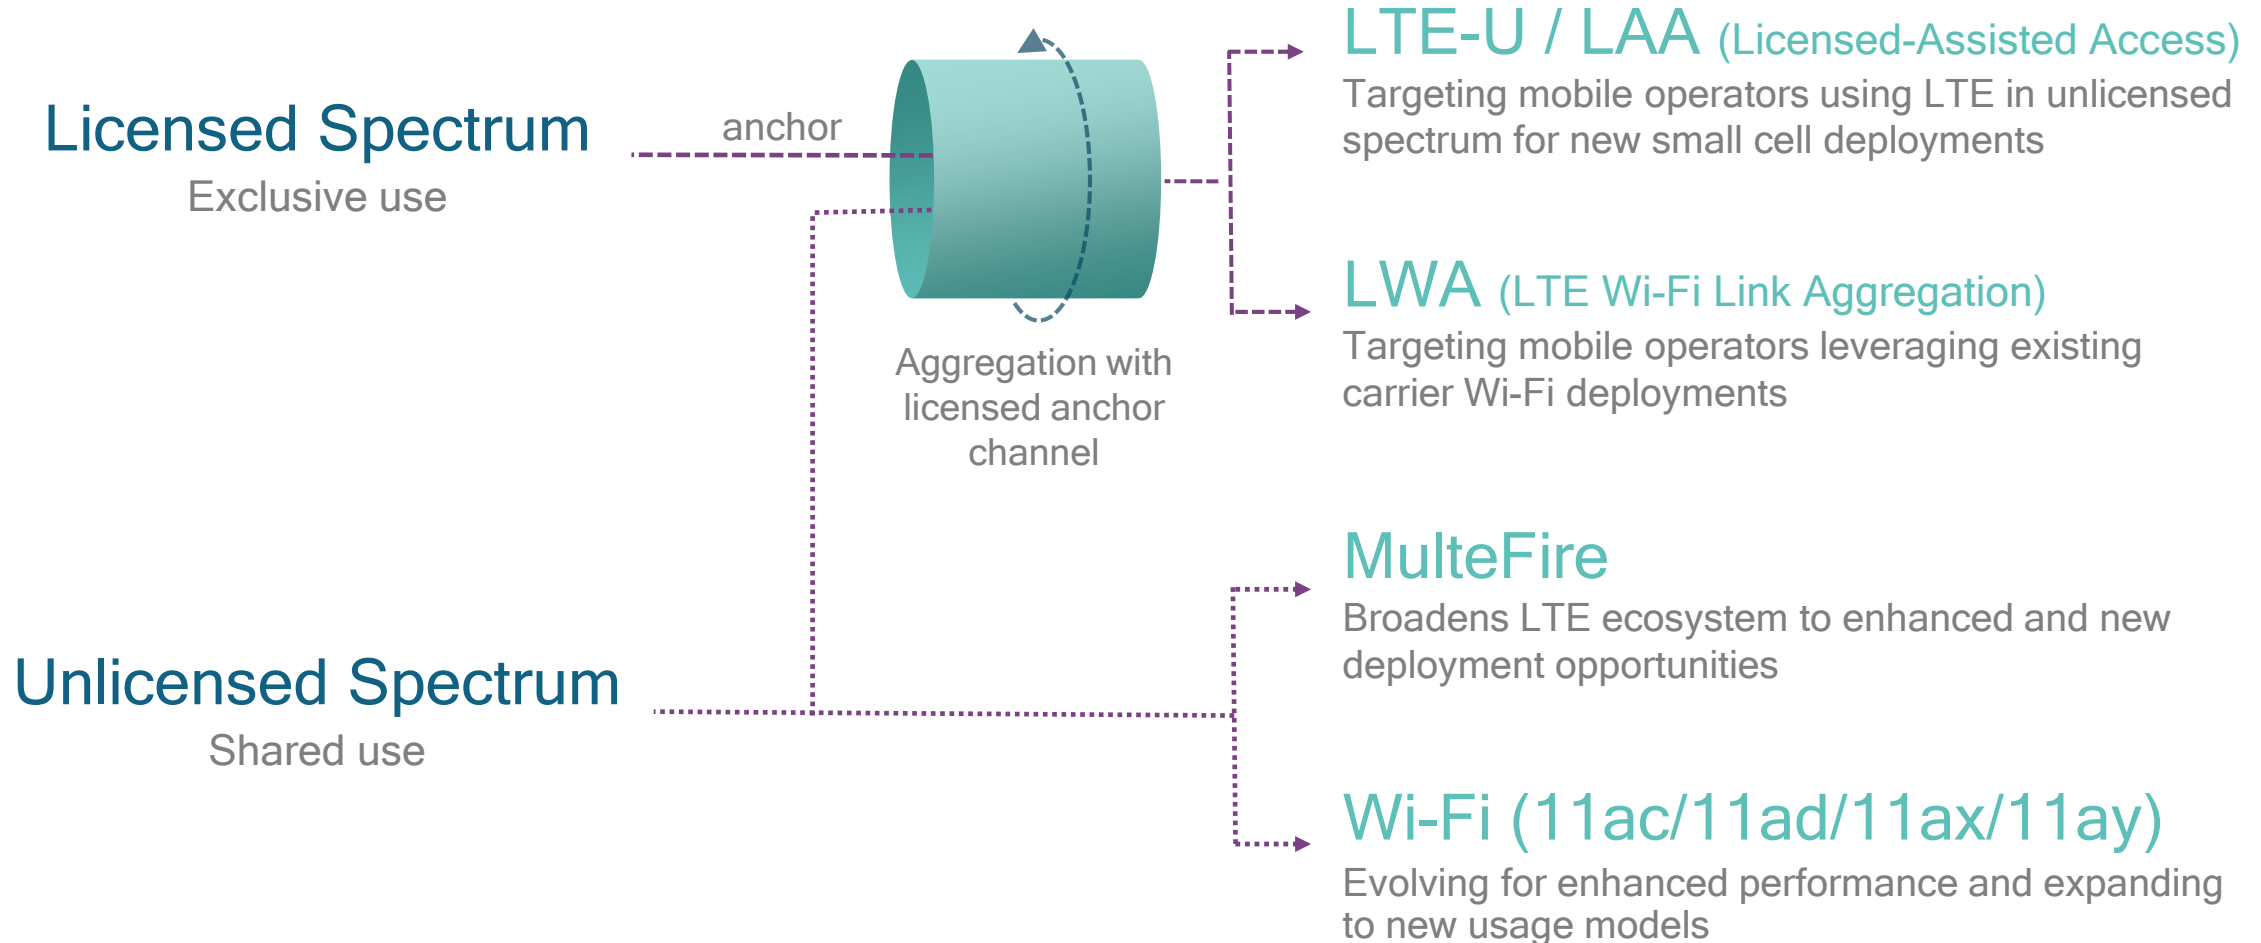

Large amounts of spectrum available globally (~500 MHz<sup>1</sup>)

Ideal for small cells thanks to lower mandated transmit power

Global neutral spectrum that can serve any user with same deployment - neutral hosts

# Multiple technologies will co-exist for different needs

# LTE Unlicensed developed through industry collaboration

Collaboration with organizations such as Wi-Fi Alliance and IEEE

## LTE-U Forum

---

### LTE-U Forum

An industry forum defining coexistence specs **LTE-U** based on 3GPP rel. 12, for early time to market for certain markets (e.g., USA, Korea, India).

---

### 3GPP for LAA

A global standardization organization for cellular network technologies such as LTE, including **LWA** and **LAA** (rel. 13) used for aggregation of unlicensed and licensed spectrum.

---

### MulteFire Alliance

An international association formed in 2015 that will develop global technical specifications and product certification for **MulteFire** based on 3GPP standards.

# Extending LTE to unlicensed spectrum

## Licensed Assisted Access (LAA)

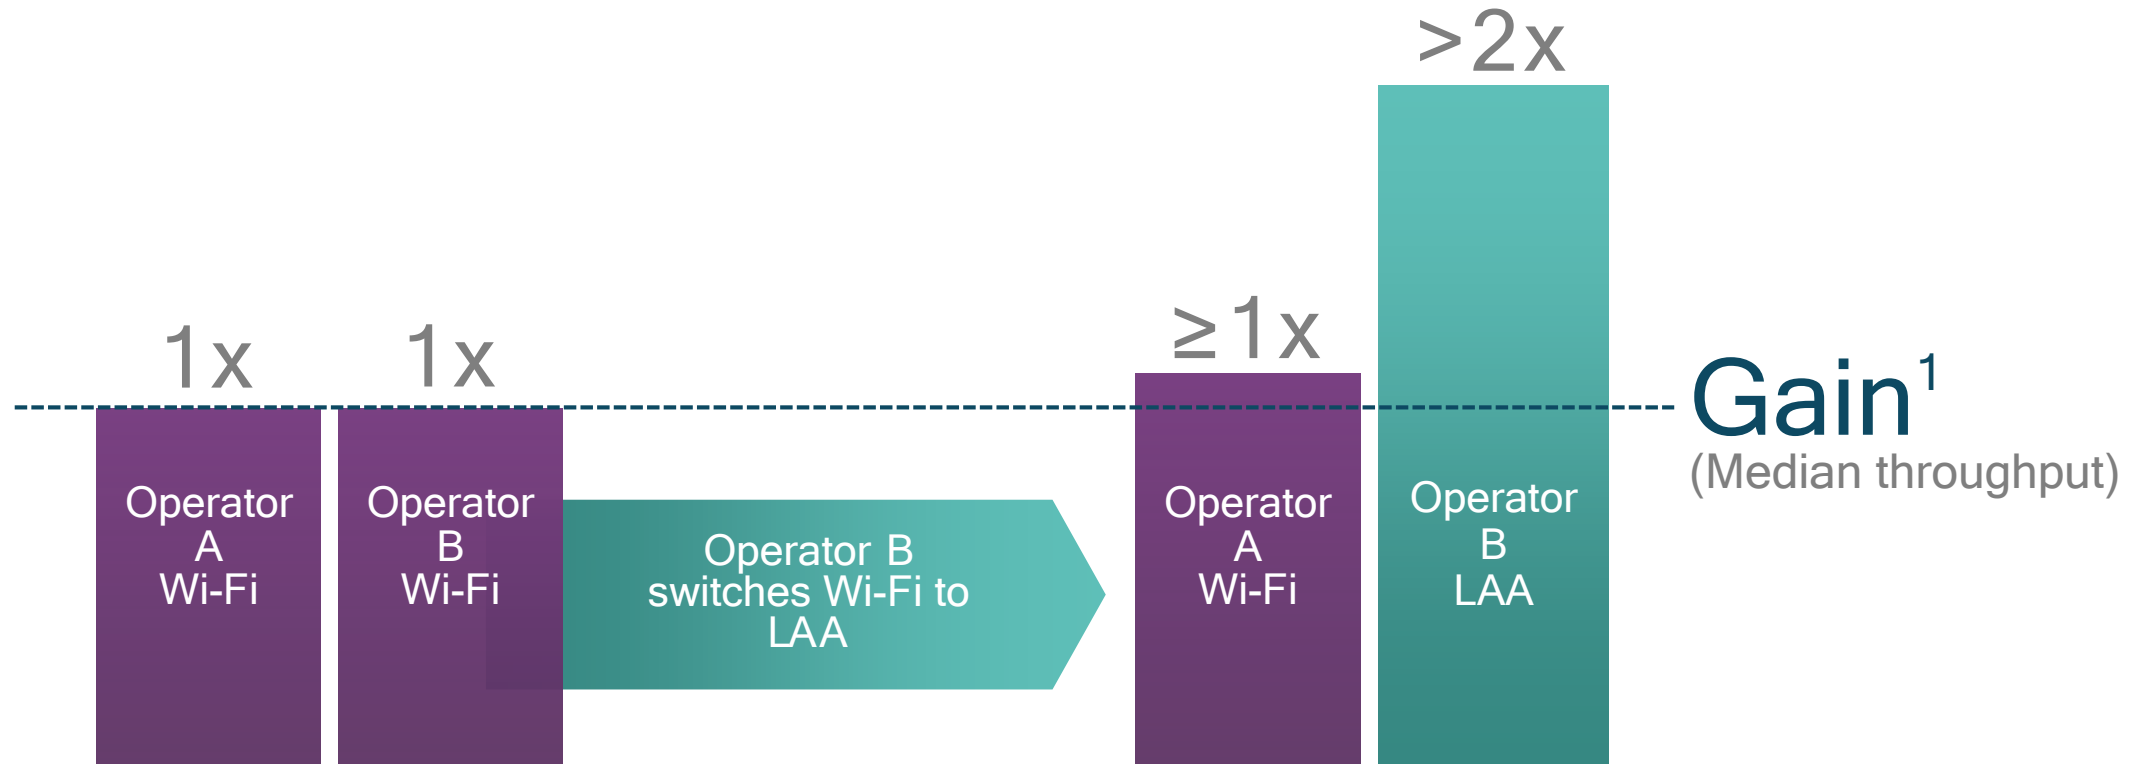

- **Path to Gbps speeds**  
By aggregating as little as 20 MHz licensed spectrum with unlicensed
- **Seamless and robust user experience**  
With reliable licensed spectrum anchor
- **2x capacity and range**  
Over Wi-Fi capacity in dense deployments<sup>2</sup>
- **Single unified LTE network**  
Common management
- **Fair Wi-Fi coexistence**  
Fundamental design principle

<sup>1</sup>Aggregating with either licensed TDD or licensed FDD is possible with SDL; <sup>2</sup> Assumptions: 3GPP LAA evaluation model based on TR 36.889, two operators, 4 small-cells per operator per macro cell, outdoor, 40 users on same 20 MHz channel in 5 GHz, both uplink and downlink in 5 GHz, 3GPP Bursty traffic model 3 with 1MB file, LWA using 802.11ac, DL 2x2 MIMO (no MU-MIMO), 24dBm + 3dBi Tx power in 5 GHz for LAA eNB or Wi-Fi AP.

# Fair Wi-Fi coexistence a key principle in LAA design

Extensive over-the-air testing performed in the lab and in the field

In many cases a better neighbor to Wi-Fi than Wi-Fi itself

<sup>1</sup> Assumptions: 3GPP LAA evaluation model based on TR 36.889 two operators, 4 small-cells per operator per macro cell, outdoor, 40 users on same 20 MHz channel in 5 GHz, both uplink and downlink in 5 GHz, 3GPP Bursty traffic model 3 with 1MB file, LWA using 802.11ac. DL 2x2 MIMO (no MU-MIMO), 24dBm + 3dBi Tx power in 5 GHz for LAA eNB or Wi-Fi AP.

# LAA is designed to protect Wi-Fi

Select clear channel: Dynamically avoid Wi-Fi

Sharing the channel fairly: “Listen before talk” (LBT)

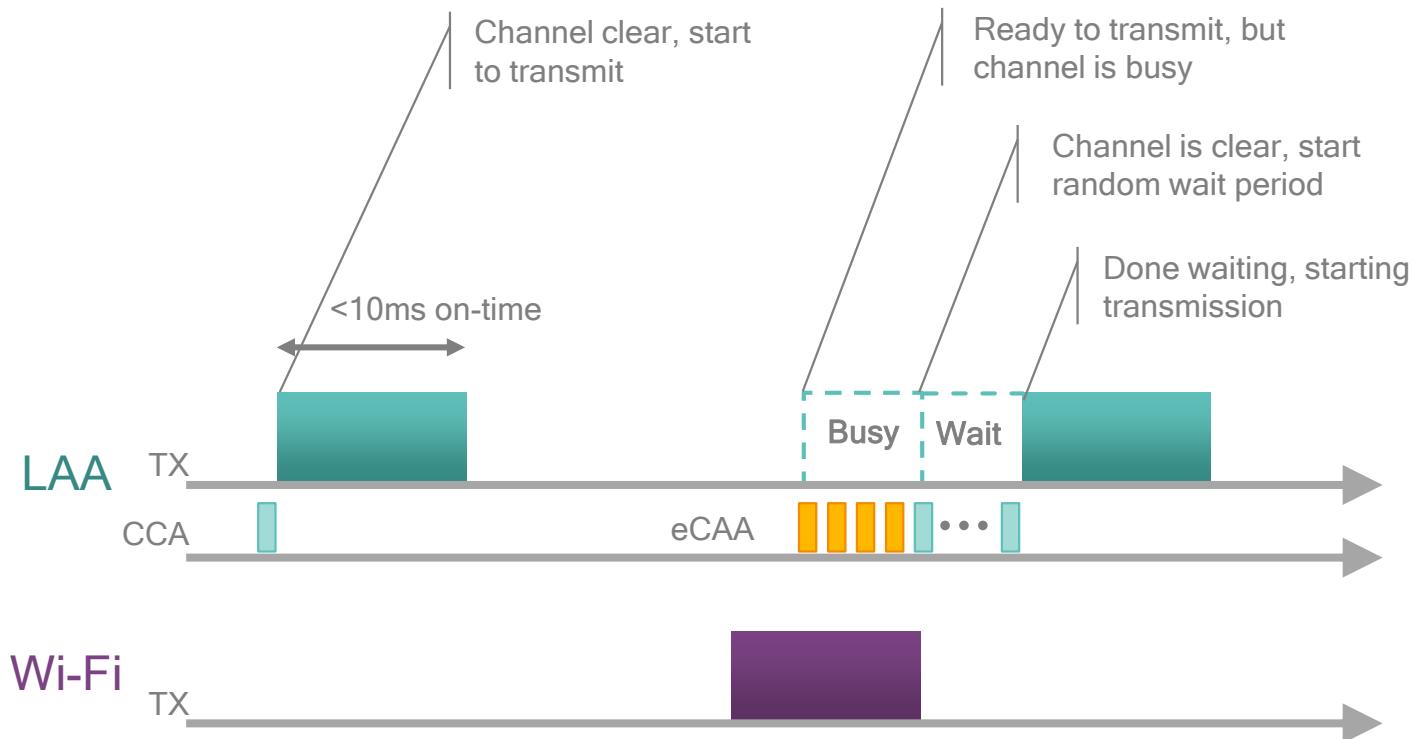

Release unlicensed channel at low traffic

# LBT ensures fair sharing in unlicensed 5 GHz

LBT is standardized in ETSI EN 301 893

## ED - Energy Detect Threshold

Introducing<sup>1</sup> a more sensitive threshold that is common for all technologies when sensing each other.

## CCA - Clear channel assessment

If no signal is sensed based on ED threshold, then go ahead with transmission right away.

## eCCA - Extended CCA

If channel is busy (CCA), then wait for it to become clear. Once it is clear, wait for a random number of additional CCAs indicating that the channel has remained clear before starting transmission.

Designed for fair sharing of 5 GHz

Meets global regulations

Same rule for everyone<sup>1</sup>, including Wi-Fi and LTE

1) Proposed in next release of ETSI EN 301 893 with a target release mid 2016.

# LTE-U and LAA part of the same evolution

## LTE-U

Time to market for certain regions: USA, Korea, India

### Based on 3GPP R12

- Supplemental downlink (SDL) to boost downlink
- Dynamic channel selection to avoid Wi-Fi and adaptive duty cycle (CSAT) to fairly coexist
- Support for migration to LAA

## LAA

Includes LBT required for global deployments

### 3GPP R13

- Supplemental downlink (SDL)
- Dynamic channel selection
- Listen before talk (LBT) complying with global regulations

## eLAA and beyond

Enhancements to LAA

### 3GPP R14 and beyond<sup>1</sup>

- Adds uplink aggregation: Boost uplink data rates and capacity<sup>2</sup>
- Dual Connectivity: Aggregation across non-collocated nodes
- Complexity reduction<sup>3</sup>

Qualcomm is showing an eLAA demo at MWC

<sup>1</sup> UL aggregation part of Rel. 14—other features proposed; <sup>2</sup> Aggregation of unlicensed downlink and uplink is possible with either licensed TDD or licensed FDD; <sup>3</sup> Complexity/cost reduction is also applicable to licensed LTE

# MulteFire: LTE-based technology solely in unlic. spectrum

Targets small-cells in unlicensed spectrum bands such as the global 5GHz band

## LTE-like performance

- Enhanced capacity and range
- Improved mobility, quality-of-experience
- Hyper-dense, self-organizing deployments

Harmoniously coexist  
with Wi-Fi, LTE-U/LAA

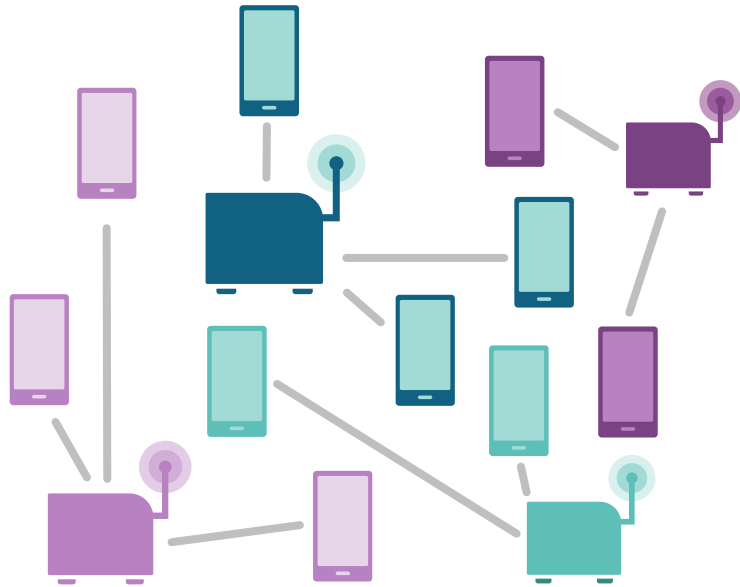

## Wi-Fi-like deployment simplicity

- Operates solely in unlicensed spectrum, e.g., 5 GHz
- Leaner, self-contained network architecture
- Suitable for neutral host deployments

Broadens LTE ecosystem to new  
deployment opportunities

# Enhanced offload for mobile networks with MulteFire

## High-performance neutral host offload capabilities

### Traditional mobile deployments

Separate spectrum bands and deployments may prohibit reaching all venues, enterprises and homes

### Neutral host deployments

Using common spectrum and common deployment provides neutral host services (Wi-Fi like)

Qualcomm is showing a MulteFire demo at MWC

# World's first over-the-air LAA trial

---

Joint effort by Qualcomm Technologies, Inc.  
and Deutsche Telekom AG  
in Nuremberg, Germany  
during November 2015

# Over-the-air trial demonstrates LAA advantages

---

## Increased coverage

Demonstrated LAA's extended range and improved performance in 5 GHz compared to Wi-Fi

---

## Increased capacity

Demonstrated downlink throughput gains over Wi-Fi.

---

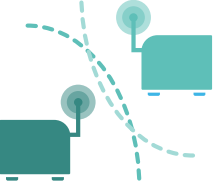

## Co-existence benefiting everyone

Demonstrated fair co-existence between LAA, LWA and Wi-Fi with improved performance for everyone.

# Completed a wide range of test cases

## Covering multiple aspects

1  Different combinations of LAA, LWA and Wi-Fi, mix of above and below ED

2  Handover between multiple small cells

3  Indoor and outdoor deployment scenarios

4  Single or multiple users

5  Different radio conditions, including corner cases such as hidden node

6  Stationary and mobile users

# Outdoor test case examples

2 LAA/LWA capable eNB (licensed + unlicensed)

2 Wi-Fi AP (unlicensed)

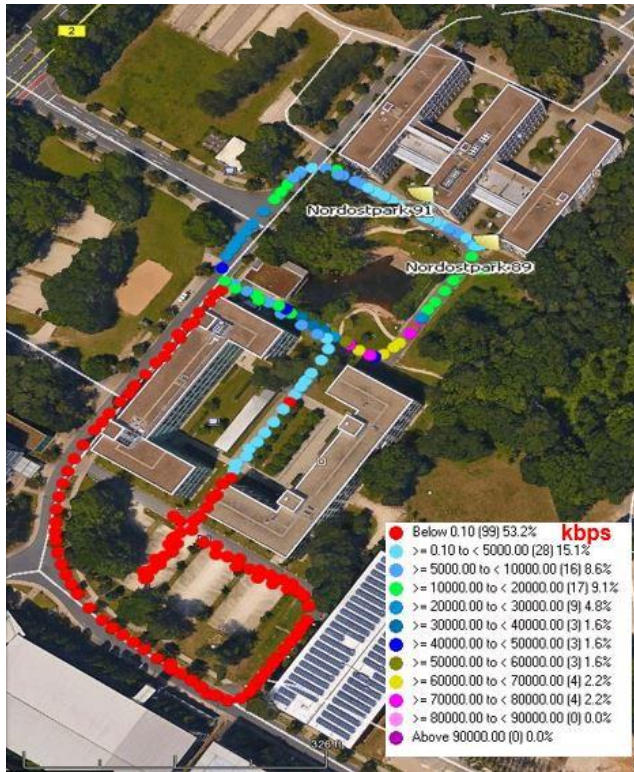

Same configuration for LAA and Wi-Fi: radio channel, 2x2 MIMO, antennas, transmit power, mobility...

# ~2X coverage improvement outdoors

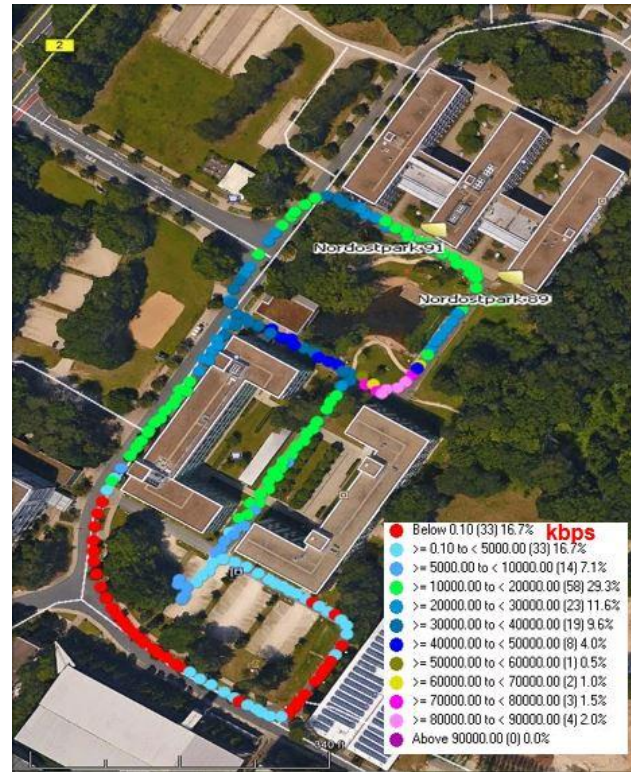

Downlink throughput in unlicensed spectrum for each location on test route<sup>1</sup>

## LWA (Wi-Fi)

## LAA

©2009 GeoBasis-DE/BKG, ©2016 Google

## Coverage<sup>2</sup> in unlicensed

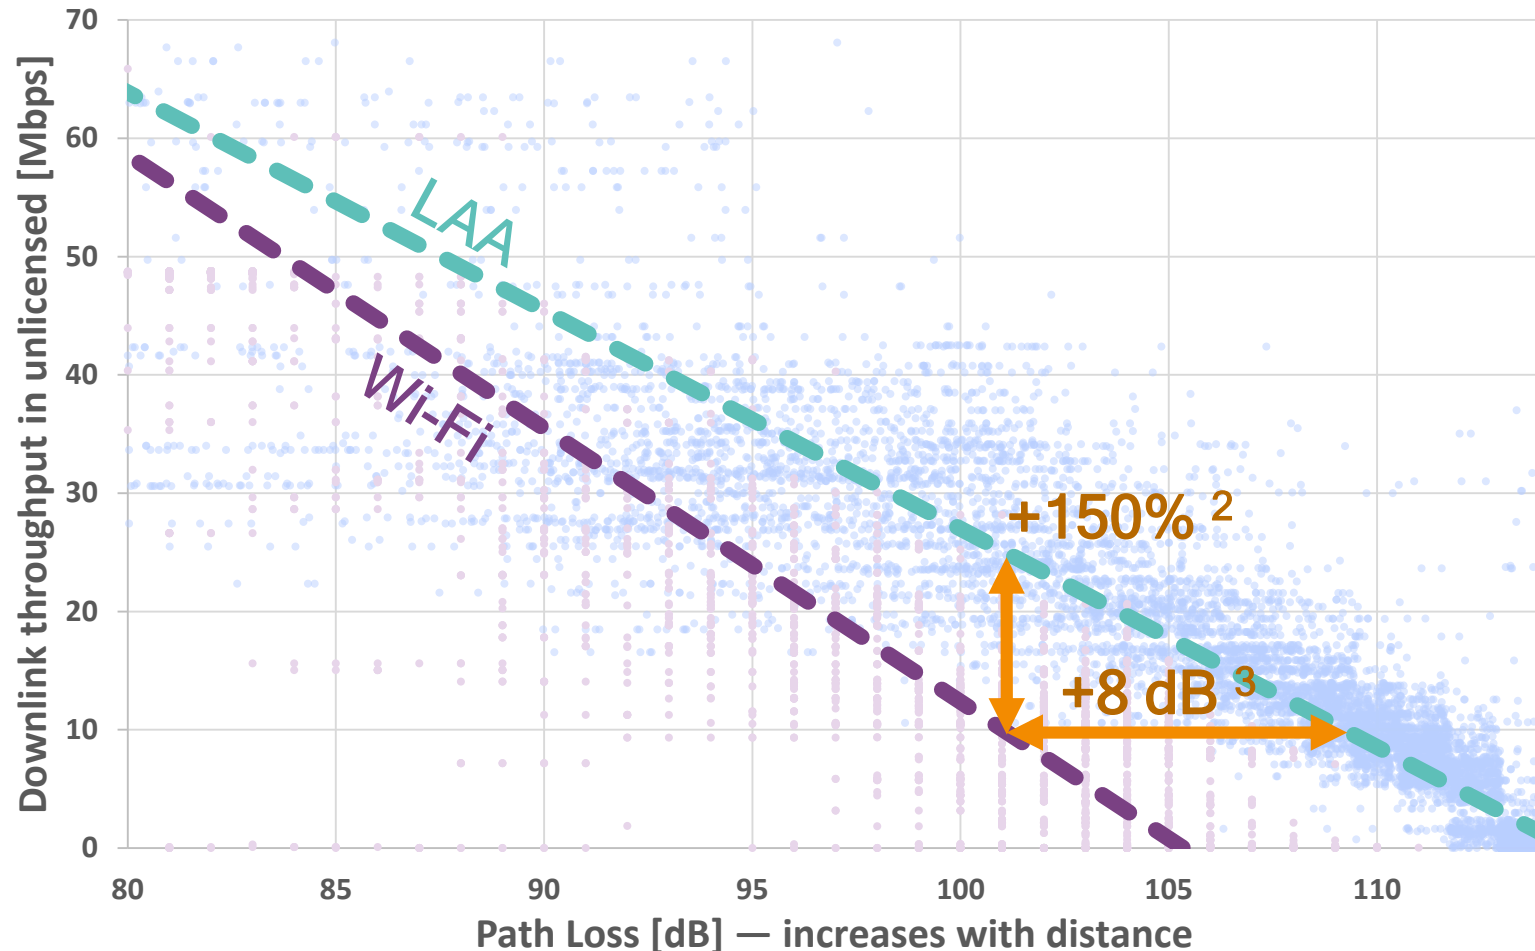

Mbps	Wi-Fi	LAA
>10	24% of route	60% of route
>1	39% of route	71% of route
>0	47% of route	82% of route

x2.5  
x1.8  
x1.7

<sup>1</sup> Single small cell, LAA based on 3GPP release 13; LWA using 802.11ac; LTE on 10 MHz channel in 2600 MHz licensed spectrum with 4W transmit power; the following conditions are identical for LAA and Wi-Fi: 2x2 downlink MIMO, same 20 MHz channel in 5 GHz unlicensed spectrum with 1W transmit power. terminal transmit power 0.2W, mobility speed 6-8 mph; <sup>2</sup> Based on geo-binned measurements over test route

# LAA outperforms Wi-Fi in challenging radio conditions

Averaged downlink throughput in 5 GHz during mobility<sup>1</sup>

## Performance when it matters

LAA's performance gains grows with more challenging radio conditions, providing more consistent throughput over a larger area.

## Increased coverage

Providing same performance at a higher path loss (further distance) contributes to LAA's improved coverage over Wi-Fi.

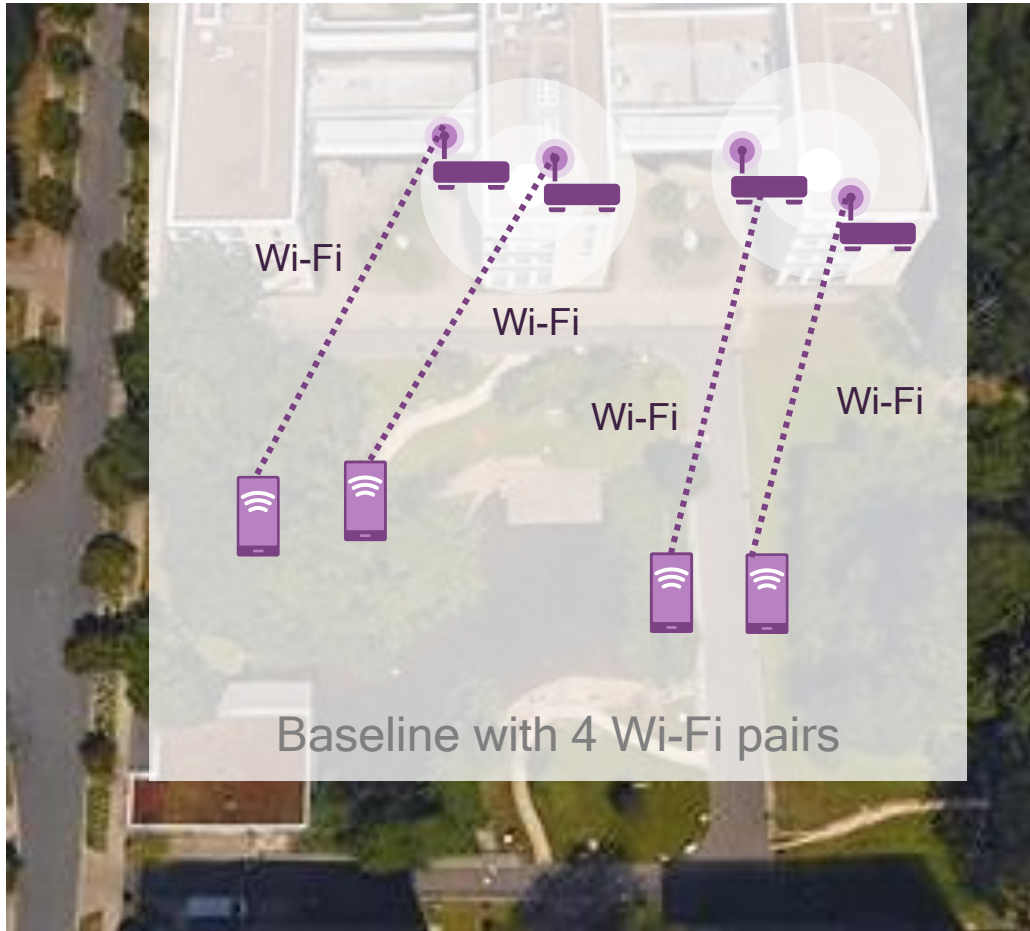

## Higher averaged throughput

In challenging radio conditions LAA offers significantly higher averaged throughput at the same distance (same path loss).

<sup>1</sup> Dual cells with handover, LAA based on 3GPP release 13; LWA using 802.11ac; LTE on 10 MHz channel in 2600 MHz licensed spectrum with 4W transmit power; the following conditions are identical for LAA and Wi-Fi: 2x2 downlink MIMO, same 20 MHz channel in 5 GHz unlicensed spectrum with 1W transmit power. terminal transmit power 0.2W, mobility speed 6-8 mph; <sup>2</sup> ~25 Mbps LAA vs ~10 Mbps Wi-Fi at same path loss; <sup>3</sup> At 10 Mbps downlink speed in 5 GHz

# LAA benefits everyone sharing the same 5 GHz channel

## A better neighbor to Wi-Fi than Wi-Fi itself

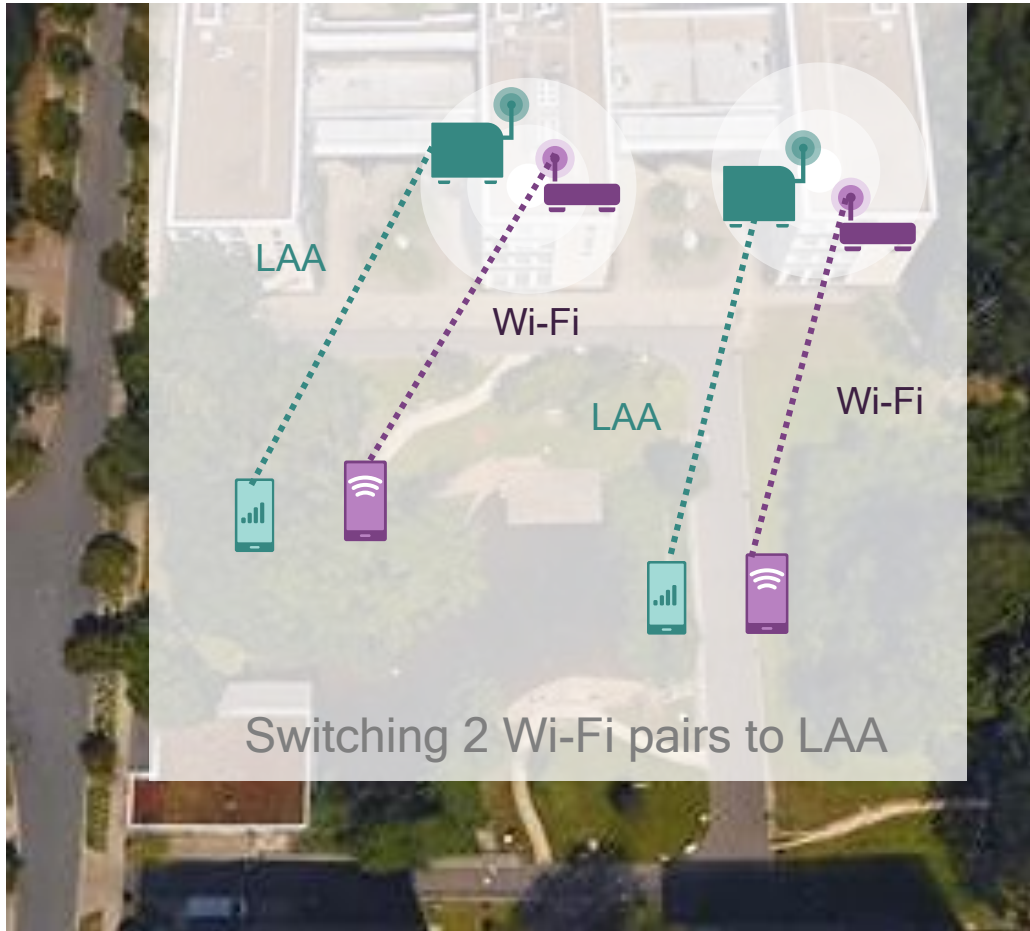

Imagery ©2016 Google. Map data ©2016 GeoBasis-DE/BKG (©2009). Google

<sup>1</sup> Outdoor, 4 users on 4 different AP/cells, Mix of above and below ED, strong signal level with some interference, LAA based on 3GPP rel. 13; LWA using 802.11ac; LTE on 10 MHz channel in 2600 MHz licensed spectrum with 4W transmit power; the following conditions are identical for LAA and Wi-Fi: 2x2 downlink MIMO, sharing same 20 MHz channel in 5 GHz unlicensed spectrum with 1W transmit power, terminal transmit power 0.2W

# LAA benefits everyone sharing the same 5 GHz channel

A better neighbor to Wi-Fi than Wi-Fi itself

Imagery ©2016 Google. Map data ©2016 GeoBasis-DE/BKG (©2009). Google

<sup>1</sup> Outdoor, 4 users on 4 different AP/cells, Mix of above and below ED, strong signal level with some interference, LAA based on 3GPP rel. 13; LWA using 802.11ac; LTE on 10 MHz channel in 2600 MHz licensed spectrum with 4W transmit power; the following conditions are identical for LAA and Wi-Fi: 2x2 downlink MIMO, sharing same 20 MHz channel in 5 GHz unlicensed spectrum with 1W transmit power, terminal transmit power 0.2W

# LAA benefits everyone sharing the same 5 GHz channel

LAA promotes fair sharing of the unlicensed channel

Same baseline with 4 Wi-Fi pairs

Switching 2 Wi-Fi pairs to LAA

Numbers in pie charts show channel occupancy<sup>1</sup>, the total is not 100% due to over utilization.

<sup>1</sup> Outdoor, 4 users on 4 different AP/cells, Mix of above and below ED, strong signal level with some interference, LAA based on 3GPP rel. 13; LWA using 802.11ac; LTE on 10 MHz channel in 2600 MHz licensed spectrum with 4W transmit power; the following conditions are identical for LAA and Wi-Fi: 2x2 downlink MIMO, sharing same 20 MHz channel in 5 GHz unlicensed spectrum with 1W transmit power, terminal transmit power 0.2W

# LAA fairly coexists with Wi-Fi

Summary from a large number of test cases over a diverse set of conditions

1 

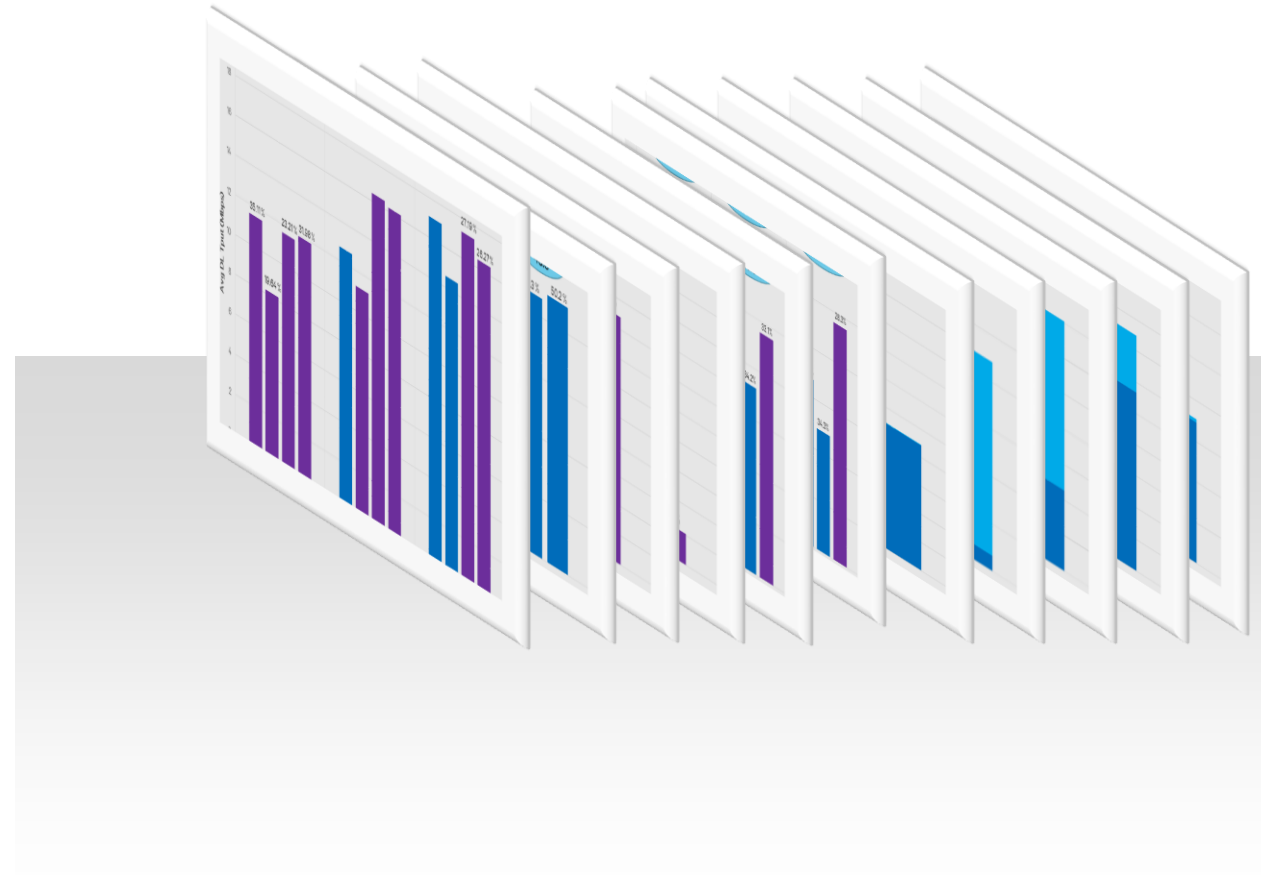

---

 Switching a Wi-Fi AP with a LAA small-cell results in overall **increased network capacity** and higher throughput for all users.

2 

---

 LBT ensures that the channel is **shared fairly between the users** and LAA is overall a better neighbor to Wi-Fi than Wi-Fi itself.

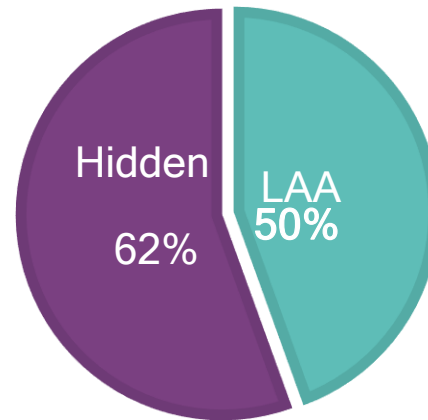

# LAA shares the channel fairly also in corner cases

## LAA is a better neighbor to a hidden Wi-Fi node

Baseline with 2 Wi-Fi pairs

Switching 1 Wi-Fi pair to LAA

Numbers in pie charts show channel occupancy<sup>1</sup>, the total is not 100% due to over/under-utilization.

<sup>1</sup> Outdoor, 2 users on 2 different AP/cells, LAA based on 3GPP rel. 13; Wi-Fi using 802.11ac; the following conditions are identical for LAA and Wi-Fi: 2x2 downlink MIMO, sharing same 20 MHz channel in 5 GHz unlicensed spectrum with 1W transmit power, terminal transmit power 0.2W; downlink traffic only in unlicensed; first user has strong signal strength while the second users on the hidden AP has around 20 dB lower signal strength.

# Summary

Successful LAA trial – a big milestone towards commercial deployment

## LAA is here with 3GPP Rel. 13

- Path to Gbps speeds with less licensed spectrum
- Improved capacity, range and mobility
- Fair coexistence based on LBT enabling global deployment

## OTA trial demonstrates LAA advantages

- Coverage & capacity benefits of LAA over Wi-Fi
- Seamless mobility of both LAA and LWA.
- Fair co-existence of LAA with Wi-Fi over large number of test cases

## LAA technology paves the way for MulteFire

- MulteFire is based on LAA with similar performance advantages.
- Combined with Wi-Fi like deployment simplicity, it can offer the best of both worlds.

Introducing the

Qualcomm®  
Snapdragon™

# X16

## LTE Modem

The first\* cellular modem to support

# Gigabit<sup>Class</sup> LTE

With Category 16 peak download speeds  
of up to 1 Gbps

# Making new mobile experiences possible...

...and enhancing existing ones

Streaming 360° video in virtual reality

Always-on cloud services including “infinite storage”

Higher FPS video communication

Near instant access to entertainment

# A 14nm FinFET discrete LTE Advanced Pro Modem

## Up to 1 Gbps - Cat 16 DL

4x4 MIMO on 2xCA + 2x2 MIMO on 3<sup>rd</sup> carrier; up to 4x20 MHz CA supported with 2x2 MIMO

---

## Up to 150 Mbps - Cat 13 UL

via 2x20MHz CA and 64-QAM

---

LTE-U and LAA - Convergence with unlicensed  
Globalizing access to LTE in unlicensed spectrum

---

## 3.5 GHz band support - New 3GPP bands

Additional licensed LTE spectrum access

Sampling now

Commercial devices expected in 2H 2016

# X16 LTE Modem

## Quick Facts

# Gigabit Class LTE with only 60 MHz of spectrum

A combination of 3x carrier aggregation, 4x4 MIMO, and 256-QAM

# Gigabit Class LTE within reach: LTE in unlicensed spectrum

Globalizes possibility of Gigabit Class LTE

Support for LTE in unlicensed spectrum in  
new geographies with LTE-U and LAA

# LTE-U/LAA globalize the possibility of Gigabit Class LTE

Operators with as little one block of 20 MHz licensed spectrum can deploy Gigabit Class LTE

# Snapdragon X16 LTE Modem

## Announcement summary

1. First\* cellular modem to achieve Gigabit Class LTE speeds
2. First\* LTE Advanced *Pro* modem
3. First\* LTE discrete modem built on 14nm FinFET process
4. Boosts peak speeds from 450 Mbps to 1 Gbps on the same 60 MHz of spectrum  
By using more antennas (4x4 MIMO) and more sophisticated signal processing (256-QAM)
5. Globalizes the possibility of Gigabit Class LTE with LTE-U and LAA
6. Based on new architecture that scales across tiers and new segments
7. Part of a complete portfolio of modems that address microamp IoT to Gigabit applications

# Thank you
