Qualcomm’s 5G Connected Vehicle Licensing Program

Auto transformation through 5G innovation

5G innovation and technology will enable new capabilities and add significant value to the automotive experience, including enhanced infotainment, real-time telemetry and analytics services, new business opportunities, advanced vehicle safety, and connected autonomy.

15+ years licensing in auto

Qualcomm has actively licensed cellular standard essential patents to the automotive industry for 15+ years, with more than 200M vehicle connectivity units licensed to date.

We introduced 5G automotive pricing to the industry in early 2020.

Licensing program

Our 5G automotive licensing program covers worldwide 3G, 4G, C-V2X and 5G cellular standard essential patents including the latest approved 3GPP specifications (Release 16). Qualcomm charges a fixed royalty of $5 per 5G-capable connected vehicle unit (including telematics control units, on-board units and in-vehicle infotainment units) for a license to these rights for automotive applications.

Rights under Qualcomm’s non-essential patents may be negotiated at Qualcomm’s discretion.

$5 per vehicle or connected vehicle unit
