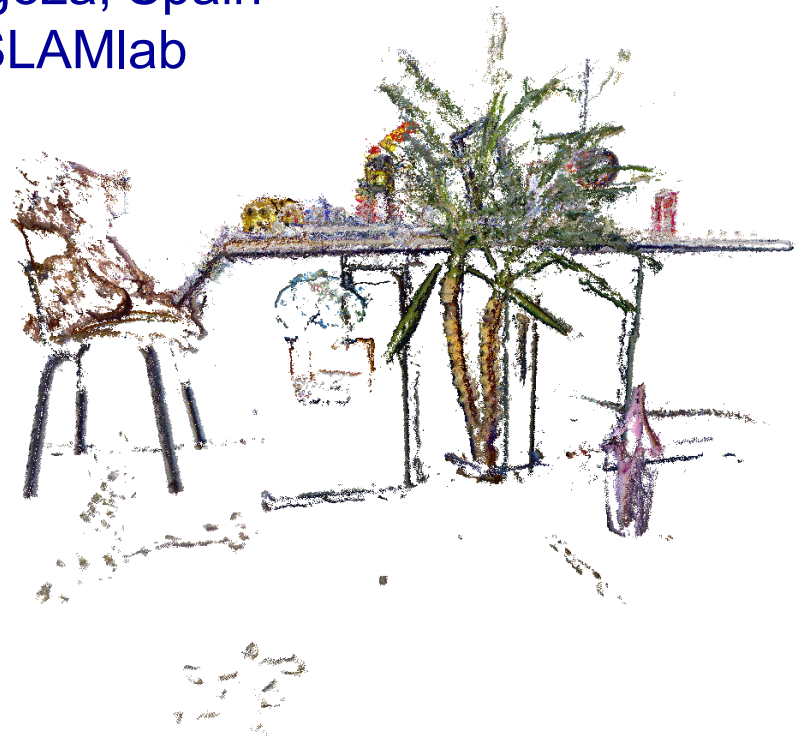
ORB-SLAM: a Real-Time Accurate Monocular SLAM System

Juan D. Tardós, Raúl Mur Artal, José M.M. Montiel
Universidad de Zaragoza, Spain
robots.unizar.es/SLAMlab



Outline

- Motivation
- ORB-SLAM: Feature-Based Visual SLAM
- Robustness and Accuracy
- Application to VR
- Discussion and Future Work

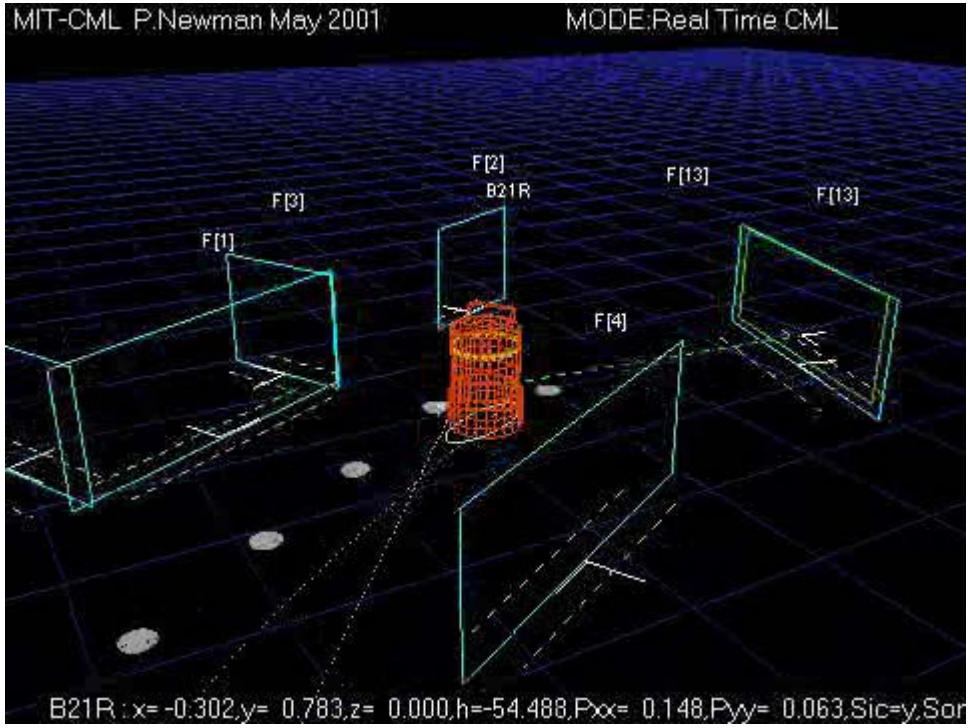
SLAM: Simultaneous Localization and Mapping

The SLAM problem:

- a robot moving in an unknown environment

Use sensor data to:

- **build a map** of the environment
- and **at the same time**
- use the map to compute the **robot location**

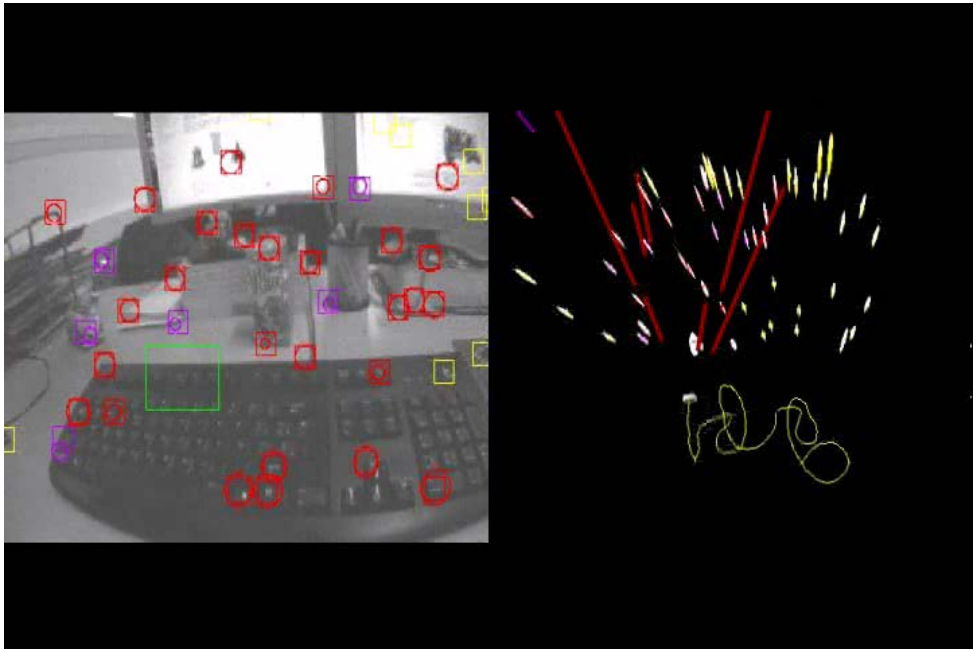


P. Newman, J.J Leonard, J.D. Tardos, J. Neira: **Explore and return: Experimental validation of real-time concurrent mapping and localization.** IEEE Int. Conf. Robotics and Automation, 2002

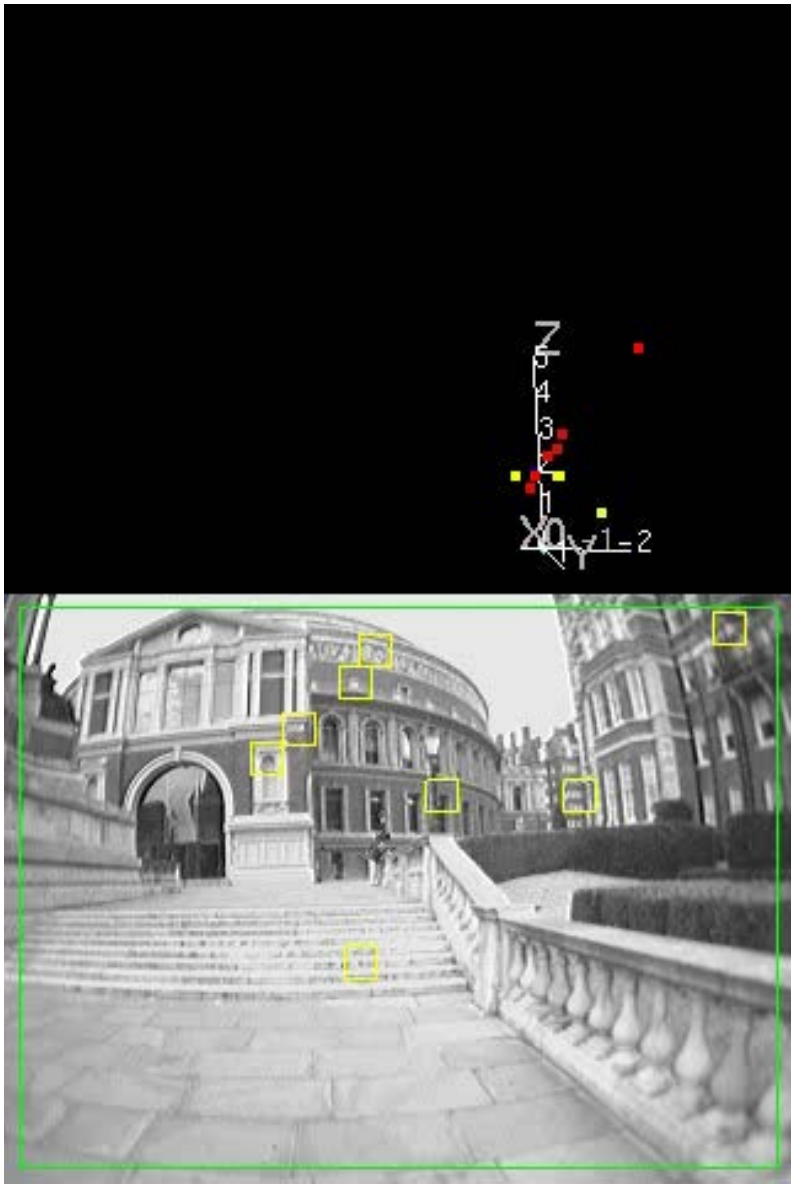
Motivation

- Head tracking in VR
  - Orientation tracking
  - Based on IMU
  - Slow drift
  - Position tracking with external camera
    - » Limited by the field of view

- Real-time Visual SLAM
  - 6DOF camera tracking
  - Monocular, stereo, RGB-D
  - Zero drift
  - Unlimited area
  - And gives a Map

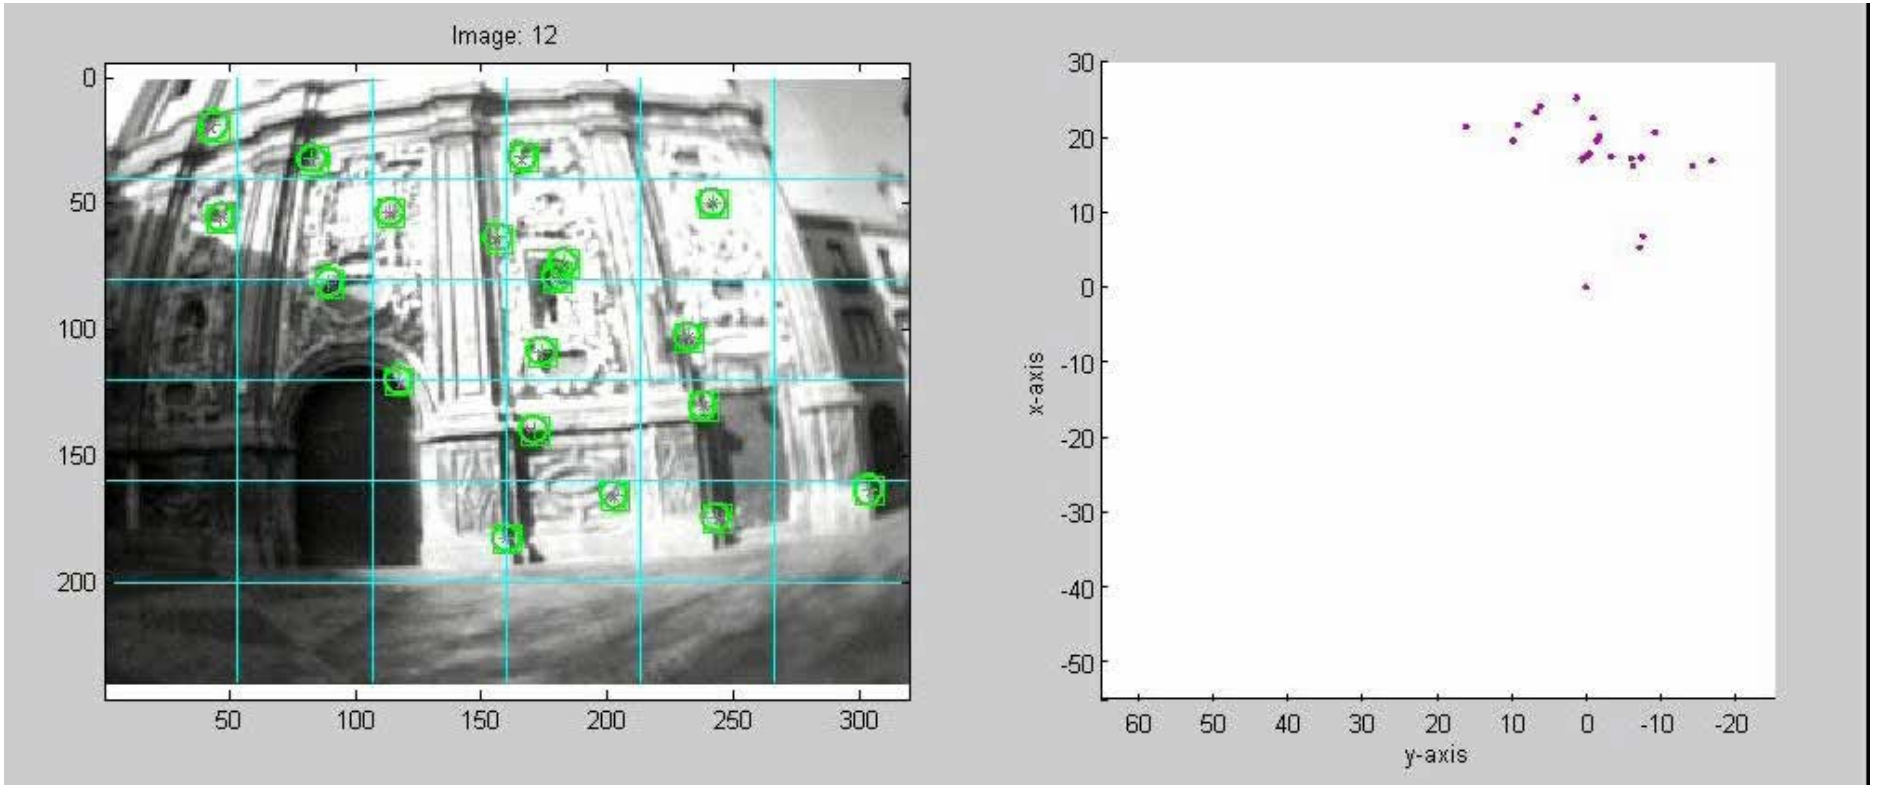


Monocular SLAM with EKF



L.A. Clemente, A.J. Davison, I.D. Reid, J Neira, J.D. Tardós, **Mapping Large Loops with a Single Hand-Held Camera.** Robotics: Science and Systems, June 2007

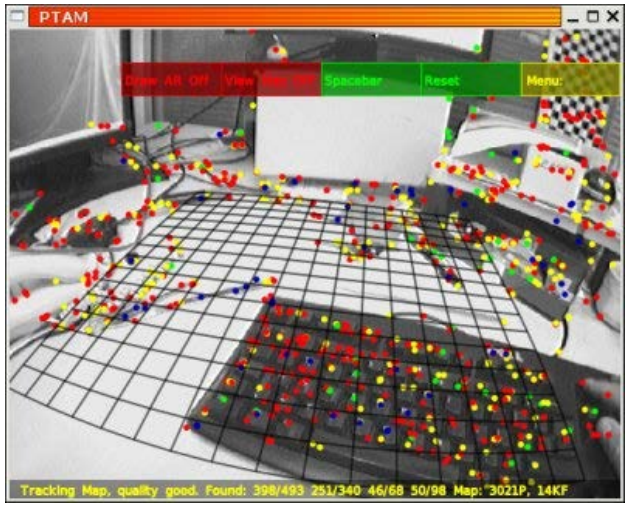
Monocular SLAM with EKF



P. Piniés, J.D. Tardós, **Large-scale SLAM building conditionally independent local maps: Application to monocular vision**, IEEE Transactions on Robotics, 24 (5), 1094-1106, 2008

PTAM: Keyframe-Based SLAM

- *Parallel Tracking and Mapping for Small AR Workspaces*
  G. Klein and D. Murray, ISMAR 2007
  - First Keyframe-Based Monocular SLAM
  - Bundle Adjustment is possible in real-time
  - Still considered a reference system



- Limitations:
  - Relocalisation with little invariance to viewpoint
  - No loop detection
  - Small scale operation
  - Initialization in planar scenes, with human intervention

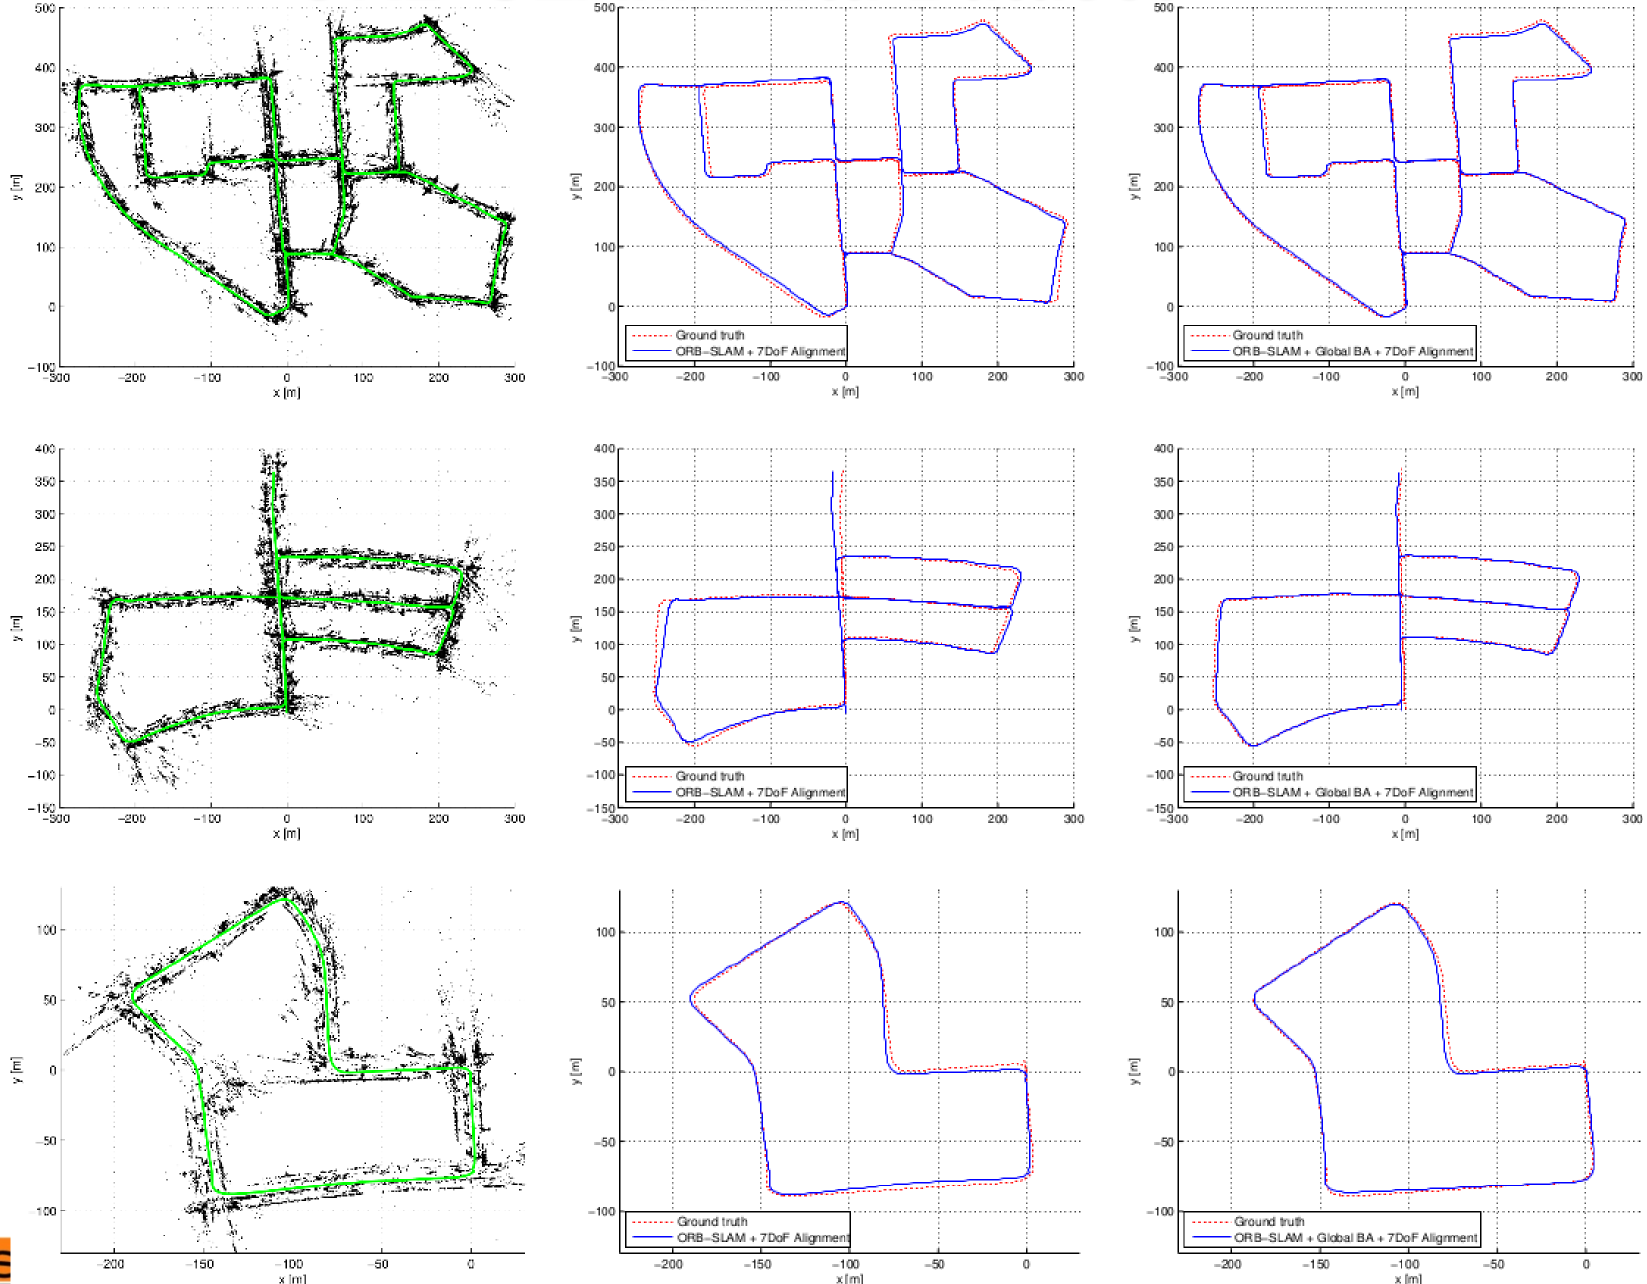
Feature-Based .vs. Direct SLAM

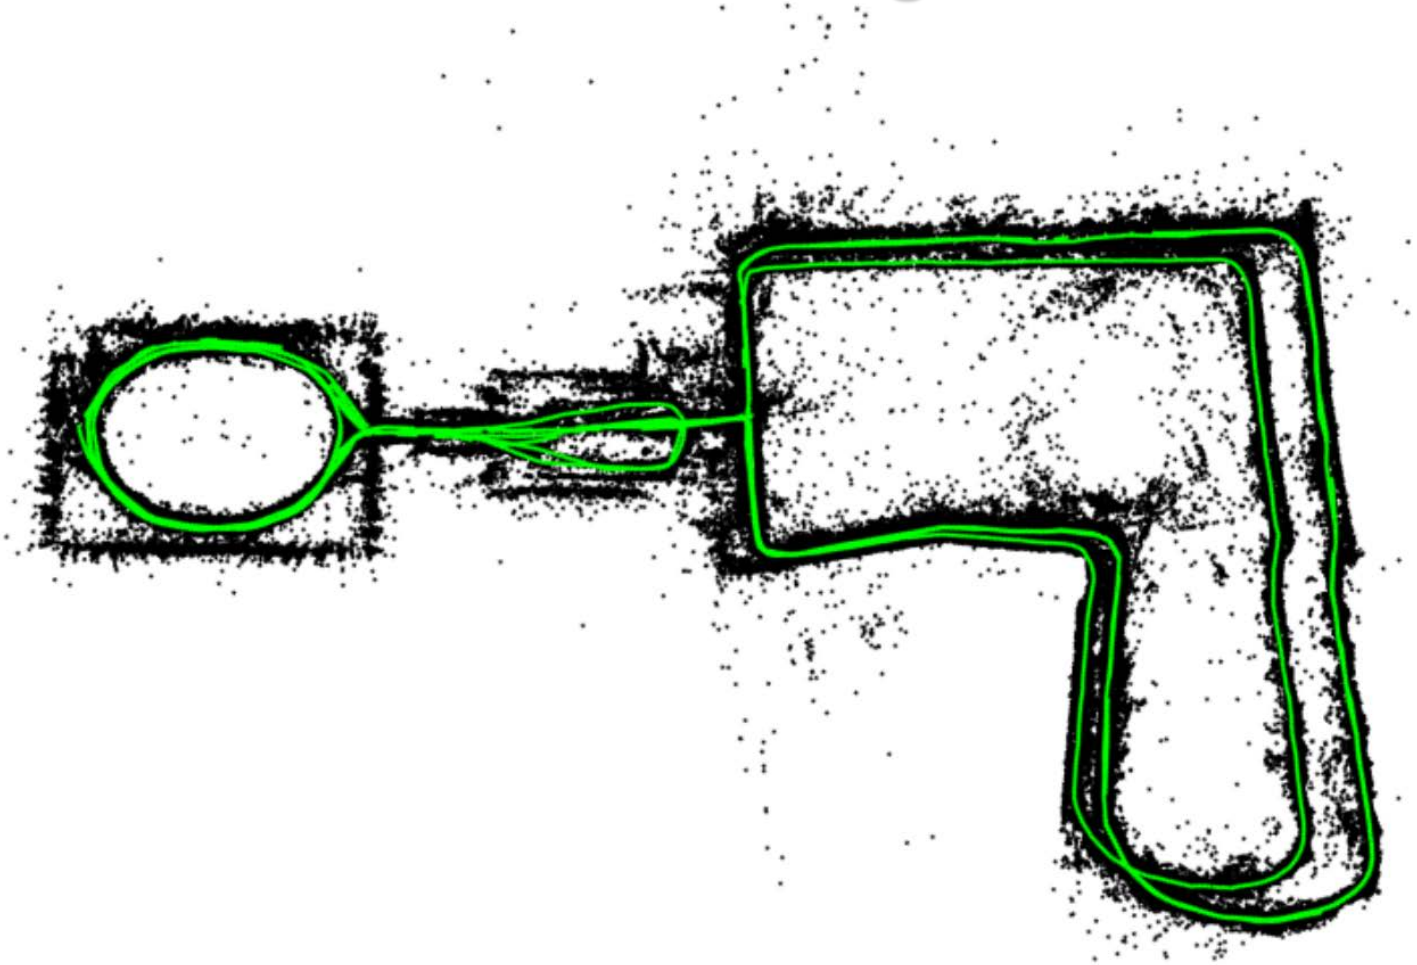
	Feature-Based SLAM (ORB-SLAM)	**Direct SLAM** (LSD-SLAM)
Matching	Illumination/viewpoint invariance *Wide baseline*	Photometric consistency *Narrow baseline*
Map Optimization	Local BA + Global Pose Graph	Global Pose Graph
Loop Detection	Integrated Place Recognition	Need Features (FabMap)
# Points	~300	~100K
Strengths	Excellent accuracy Robust in dynamic scenes Robust initialization	Robust in low texture areas Robust under defocus/motion blur
Weakness	Low texture areas Motion blur	Dynamic Objects Strong viewpoint/illumination changes Rolling-shutter cameras

ORB-SLAM outdoors: Kitti Dataset

ORB-SLAM: Kitti Dataset



ORB-SLAM: New College Dataset



Median Tracking Time per Frame: 30ms
Median Mapping Time per KeyFrame: <400ms

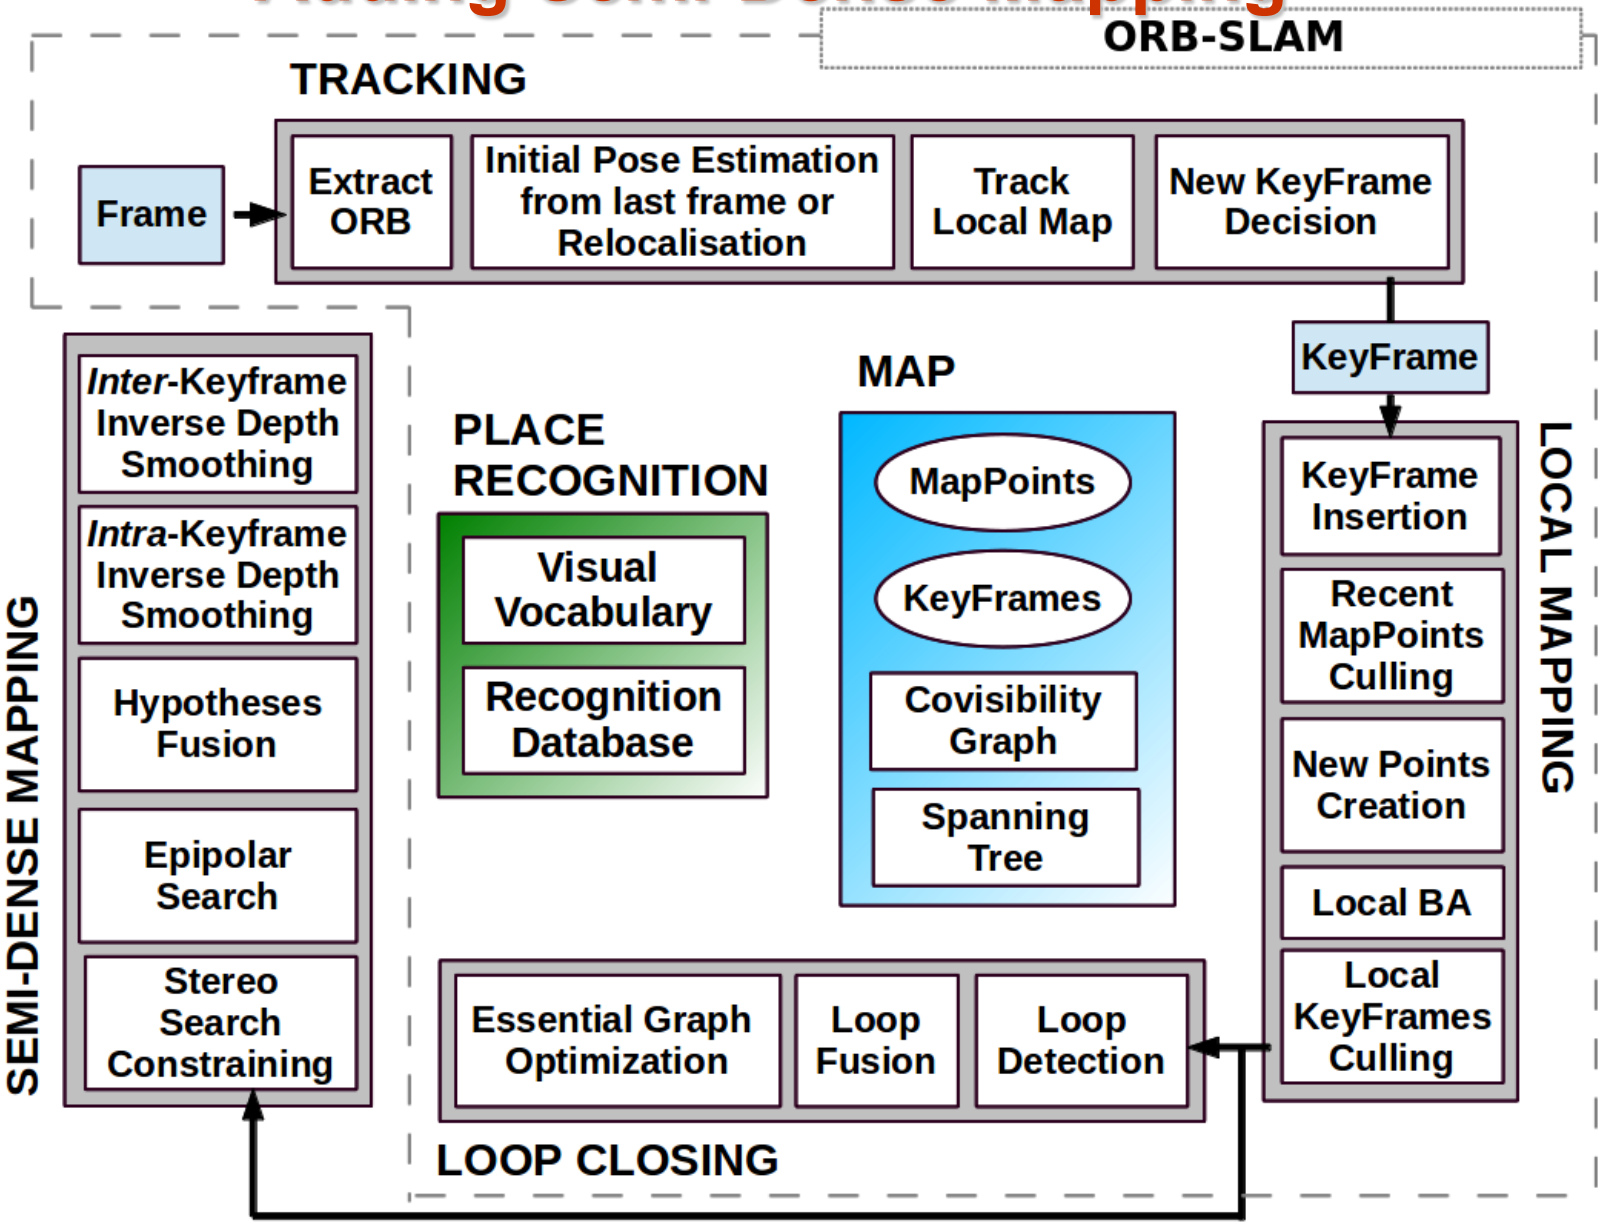
Intel Core i7 @ 2.4 GHz
(4 cores)

Limitations and Extensions

- Limitations
  - Monocular → the absolute scale is unknown
    - » Include in the map a known-size object
  - Requires a reasonably lit area
  - Needs texture: will fail with large plain walls
  - Map is too sparse for interaction with the environment

- Extensions
  - Improve agility using IMU
  - Stereo camera: real scale and robustness to quick motions
  - RGB-D camera: track with features + dense map
  - Semi-dense or dense mapping

Adding Semi-Dense Mapping



ORB-SLAM + Semi-Dense Mapping

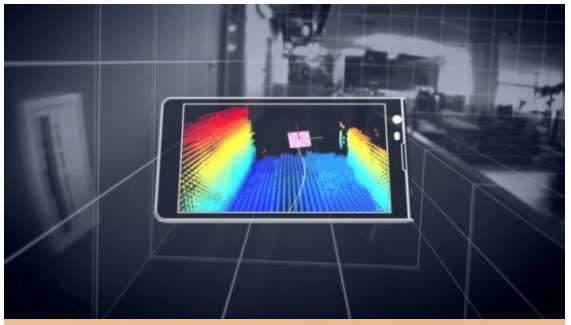
Application to VR

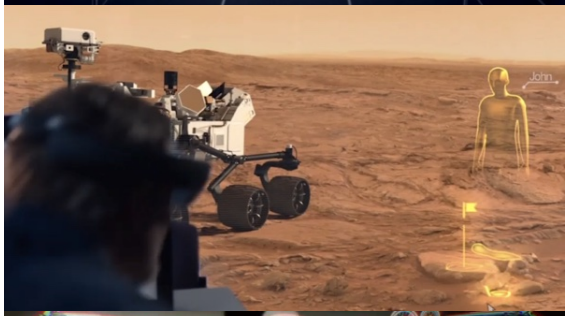
- ORB-SLAM: Feature-Based monocular SLAM
  - Tracking with ORB in <30ms
  - Local mapping: survival of the fittest for keyframes
  - Relocation and loop closing with good viewpoint invariance

- Application to Virtual Reality:
  - Map creation in real-time
  - Viewpoint tracking
    - » Mapping and loop closing can be disabled
    - » Zero-drift tracking
    - » Typical accuracy indoors: 1-3cm
    - » Possible to track multiple users, with different cameras

Some VR Projects using Visual SLAM

- Project Tango (Google)
  - Visual-inertial odometry
  - Area learning (SLAM)
  - RGB-D sensor





- Hololens (Microsoft)
  - RGB-D sensor

- Magic Leap
  - ???

Summary

- ORB-SLAM: Feature-Based monocular SLAM
  - Large-scale operation
  - Loop closing and relocation
  - Robust operation, indoors, outdoors
  - Excellent precision
  - Open-source version released under GPLv3
