# QUALCOMM®

Qualcomm® Security Solutions

Qualcomm® SecureMSM™ technology, uniquely based in hardware and software, is the security foundation for billions of devices using Qualcomm® Snapdragon™ processors and Qualcomm® Gobi™ modems.

SecureMSM Technology

Qualcomm® Snapdragon StudioAccess™
Premium video protection, so users can enjoy the latest, higher resolution content from movie studios

Enterprise & BYOD
Security solutions that help ensure that corporate networks can safely and securely connect with employee- and corporate-owned devices

Authentication
Developing authentication alternatives such as biometrics and important related standards like FIDO. (Fast IDentity Online)

Qualcomm® SafeSwitch™ Technology
Enables users to remotely lock their mobile device if it's lost or stolen, and then unlock it if it's found

Security for every mobile platform

Today, security is vital across more platforms than ever before. To make sure every access point is safe, we enable and support seamless security that goes beyond phones, tablets and laptops to help secure embedded devices in homes, applications running in cars, wearables, and every place that safe communication is needed.

Evolving mobile security

A safe haven for sensitive data

Created by a solution within your device

SEPARATED

Secure MSM

DIRECT AND SAFE COMMUNICATION

That runs separate from everything else

For more secure, safe and direct communication
